

(10) My inductive reason concludes that the Biblical view is logical, it squares with empirical science it satisfies my questions about the world and also where did I come from?  
Why am I here?  
What happens when I die?

I find myself wondering why would any scientists try so hard to come up with a theory that is naturalistic instead of supernatural. This is why: I quote

"I hold the position ~~that~~ that life spontaneously generated + evolved not because it has ever been observed, not because it can be explained rationally, but because the only other alternative is unacceptable that of special creation is clearly unacceptable"

4 implications Why would that be unacceptable?  
① Because if God exists then God made me (Rom 11)

② This means I'm accountable to God - and I will answer to Him. He's the Creator I'm the creature. He has the right to call me to account.

③ The third implication - God is not pleased. We all know that deep inside of us - we know we've lived independent alienated lives from God - committing all kinds of sins.
